

Pcounter Web Report

Reports on your Web browser

Pcounter Web Report (PWR), is an add-on software module which works together with the Pcounter server software. PWR displays Pcounter built-in reports in a single Web browser, offering various report models for enhanced statistics and analysis.

PWR is a very useful tool to get instant reports on the print and copy traffic over your network of printers, and multifunction devices.

More than statistics, PWR offers a view of how your printing equipment is being used, and helps you to take the right decision at the right time. PWR can be used on any PC, Mac, or other workstation with a web browser, and with connection to the local network.

PWR does not require any specific training and can be used by anyone who can use a web browser.

A true database

PWR is based on Apache, PHP and MySQL database. It permanently scans Pcounters log file and stores the data from the log in specific tables. PWR generates three kind of screen shots

- Global reports which summarize a particular activity. These reports display only condensed information to obtain an overall view of the traffic without deep details. Each of the line displayed in a global report has a link to its own detailed information
- Detailed reports which can be accessed by a simple click on one of the link from any global report. This offers a full detailed analysis with basic data like cost, number of jobs and pages
- Graphic views can be obtained by clicking the "View Graph" button on each of the global reports. Some of the graphic views have a radio button which offers to toggle between a per page view or a per cost view

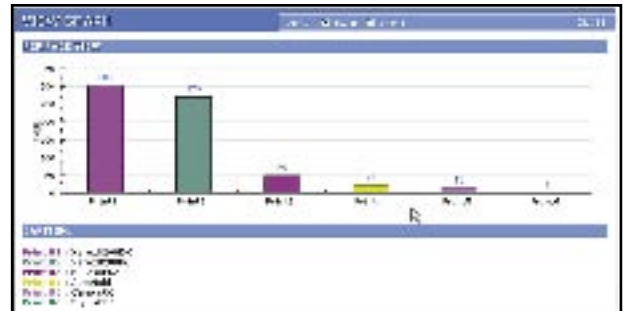

Graphs on a click

PWR generates graphic views within your browser.

Graphic views can be obtained by clicking the "View Graph" button on each of the summary reports. Each graphic view offers a bar graph history for cost, jobs, pages traffic, and color vs B&W consumption.

Caption for each graph gives a clear visibility of who prints what and on which printers, plus many other features

Features and Benefit

A user friendly web tool to get instant volume, traffic and cost analysis. Pcounter Web Report is a 100% Web Report Builder application which works in conjunction with Pcounter software to offer a large choice of print/copy traffic and cost reports.

This brings to the administrators and to the company management, all detailed data to get a dynamic and true visibility of the printed document overall cost. All reports are accessible via a single Web browser from any workstation without the need to run Pcounter on this workstation. Reports can be saved in HTML and CSV formats. They can also be sent by e-mail. PWR also displays graphic views of the reports and brings instant information on color vs B&W printed volumes.

Pcounter

The intelligent Document Accounting solution

Pcounter Web Report - Key features

PWR offers 5 modules of reports. Web reports offer an extended and complete view of the printing traffic over your network, regardless of the size and location of the printers, just on a single mouse click

GLOBAL REPORTING

This module shows a set of various reports which display a summary of the overall activity. Each of the Global Reports gives you a direct view of Total Activity by User, printer, copier and by Client/Service code.

DETAILED HISTORY

This module can generate full detailed reports based on a particular user, printer or copier combined with a range of dates you can choose. Each detailed report will give you up to 16 fields of data such as user, printer, paper format, job size, number of pages, job cost and user balance and of course, date and time for each job.

TRAFFIC ANALYSIS

For a particular printer, or for all printers, this module will generate 7 different reports including average daily traffic, average hourly number of pages and will display a B&W vs Color traffic analysis

COST ANALYSIS

For a range of chosen dates and a selected printer or user, this module will provide detailed data concentrated and total cost of printing.

DASH BOARD

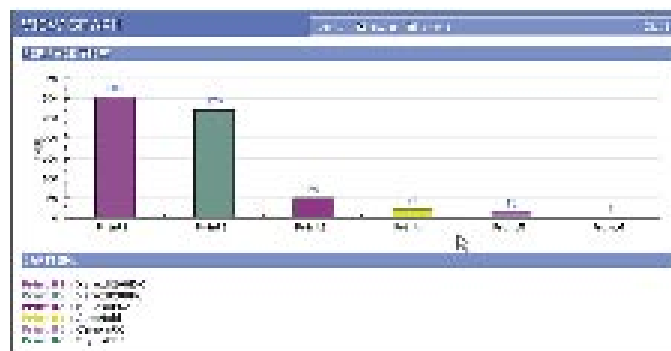

Dashboard is the default home page of PWR. Each time you launch PWR, you come to the Dashboard. It offers a complete view of your total activity on a single web page. With Top 10 printers, you have an instant visibility on what is the current traffic and cost situation. Same with Top 10 users. Both will show you data tables and corresponding graph on a single

Specification

PWR requires to be installed on a PC running Windows NT, Windows 2000, Windows 2003, or XP Pro. Internet Explorer will be the required as the default Web browser. Other Browsers might show small differences on data display.

PWR is using WAMP5 as computing system. WAMP5 is an Open Source software package which deploys Apache server, PHP language and editor, and MySQL database. As Apache will become the main Web server, Microsoft Internet Information Server (IIS) will need to be disabled before to start the installation.
