

Pcounter Web Report 4 GDPR

Make your printing GDPR compliant with Pcounter Web Report

20.000+ companies worldwide trust Pcounter with their print jobs every day.

Make printing GDPR compliant, fast and easy

Pcounter Web Report 4 GDPR is an additional module for our Pcounter Web report 4. To access the module, an extended license is required. Software and installation procedures are the same.

Offering end user portal, GDPR Privacy Statements and Indication of which and how personal data is processed, retention time, information about the Data Protection Officer, modify, erase or transfer data.

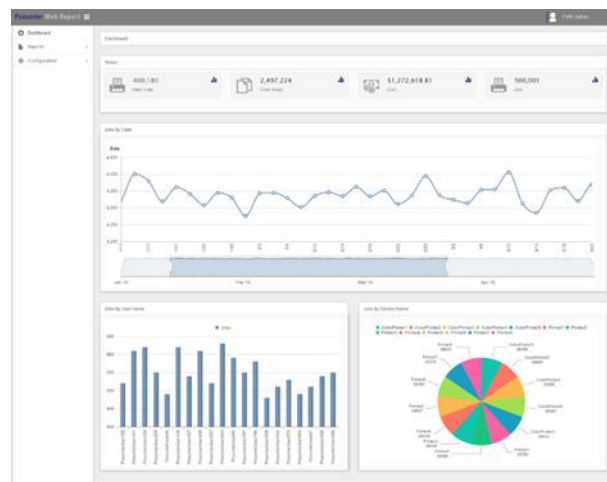

New demands for user print tracking and management

GDPR is the most significant development in data protection that Europe has seen over the past twenty years.

GDPR compliance requires new ways of working with data. Usernames, emails, document names and much more needs management and intelligence.

With thousands of print jobs and users registered, how time

demanding would it be to make sure that all personal information is removed or archived correctly?

You need the ability to prepare the data for GDPR already when its produced by the user. This is what the Pcounter Web Report GDPR is all about. Make sure printing complies with the requirements.

The 48 hour deadline...

Documentation that personal data has been removed, must be available within 48 hours from the request "I want to be forgotten" is placed. This requires the

needed functionality to easily document anything and ensure the right to be forgotten is automated.

- Education is not enough
- Actions are needed

End user portal - GDPR Privacy Statements and Indication of which and how personal data is processed, retention time, information about the Data Protection Officer, modify, erase or transfer data.

Right to be forgotten - Option to anonymize Username on any reports. Securing and limiting access to the original Pcounter.log files on disk via reversible encryption.

Time limits- Set Automatic data retention rule to remove data older than a pre-defined period.

System audit logs -Extensive system audit logs to trace who, when and what data has been accessed.

PWR4 functionality - User friendly Dashboards, Modernized HTML 5 Web interface, powerful report builder, single page summary reports, comes with embedded SQL local DB platform or can be hosted on a customer SQL server and IIS platforms for larger installations.
